

Environmental and Sustainability Policy

Built Environs provides building and engineering construction services for a range of clients in the private development and government sectors.

We recognise that our activities can have an impact on the environment and are fully committed to minimising the environmental impact of our works as much as reasonably practicable.

Company goals include prevention of pollution and other adverse environmental impacts, efficient use of resources and recycling of materials where possible. Built Environs undertakes to provide the necessary resources and management support to achieve these goals.

In particular, we have established and will maintain, review and continually improve our program for management of environmental aspects that we can control or influence during delivery of our services.

The environmental and sustainability objectives of the company are:

- We are all accountable for the environmental and sustainability legacy we leave.
- Built Environs aims to foster a culture that embraces and focuses on environmental and sustainability issues.
- We aim to promote environmental and sustainability initiatives across all aspects of the business.
- We aim to become a role model in our relevant industries with our approach to environmental and sustainability initiatives.
- We will develop and implement a company-based program to advance our environmental and sustainability education.
- We will advance environmental and sustainability best practice through complying with current legislative requirements and through following our own best practice methodology.
- We will set meaningful performance indicators and continually monitor our business against set targets.
- We will source innovative thinking to promote innovative solutions and practices to achieve positive environmental and sustainability outcomes.
- We will be actively involved with environmental and sustainability responsive organisations.
- We will comply with all legal requirements as appropriate, including environmental legislation and regulations, construction industry codes of practice, and project-specific requirements.

Jim Frith

Managing Director
